WHO SHOULD GET SCREENED?

Tobacco and alcohol users are at the greatest risk for these cancers. However, tonsil and tongue cancer is on the rise in younger adults who do not smoke, and recent research indicates this development is due partly to the increase of the human papillomavirus (HPV) virus, a cancer-causing infection that can be transmitted by oral sex.

Screenings available on a walk-in basis during the event or you can contact the Temple Head & Neck Institute to schedule a screening. Call 215-728-0574 and indicate the date, time and location you would like to attend.

Temple Health refers to the health, education and research activities carried out by the affiliates of Temple University Health System (TUHS) and by the Lewis Katz School of Medicine at Temple University. TUHS neither provides nor controls the provision of health care. All health care is provided by its member organizations or independent health care providers affiliated with TUHS member organizations. Each TUHS member organization is owned and operated pursuant to its governing documents.

Non-discrimination notice:

Temple University Hospital does not exclude participation in, and no one is denied the benefits of, the delivery of quality medical care on the basis of race, religious creed, sex, sexual orientation, gender identity, disability, age, ancestry, color, national origin, physical ability, or source of payment.
